Onboarding new users - Chat flow

Requirements

- We show a set of questions selected dynamically:
    - The order of questions is not predetermined
    - The number of questions might vary
- The current question might consider all the previous answers the user gave, and/or external inputs

Solution

- Admin Portal
- Set of Questions
        Dependent Questions
        Mandatory / Optional
        Type of Questions
    Order of questions
    Format of questions (JSON)

    Return the questions-> If questions have multiple then get response from user and call api to pass response and current question-> return next questions

    Start API-> Get Questions
    Response: [
      1: {questionsId: 123
          Order: 1
        type: radio
        options: [{id, 1,
                    Text: yes},{
                    Id: 124,
                     Text,}
                ]
    }2: {
        questionsId,
          Order,
          Property:[
        {textId: 1,
         Hint: adasf
         },

```
{textId: 2,
    Hint: adasf
     }
]

Dependent Question->
Request:; {
 currentQuestionId,
 Answer:[{ id:123
          text_key
}
]

Response:
1: {questionsId: 123
     Order: 1
    type: radio
    options: [{id, 1,
             Text: yes},{
             Id: 124,
              Text,}
          ]
}2: {
   questionsId,
    Order,
    Property:[
   {textId: 1,
    Hint: adasf
    },

BusinessRuleService nextQuestion(Request){
   //

}
